Objective

Final-year CSE student at IITRAM (2023–27) with strong hands-on experience in data analytics, data cleaning, visualisation, and business intelligence reporting. Proficient in Python, Pandas, NumPy, Power BI, and Streamlit. Eager to join Advorix Technologies to apply analytical skills on real-world datasets, build insightful dashboards, and deliver data-driven recommendations.

Education

IITRAM – Institute of Infrastructure Technology Research and Management

Bachelor of Technology in Computer Science Engineering | CGPA: 7.54

Aug 2023 – Present

Ahmedabad, Gujarat

- Coursework: Machine Learning, Statistical Analysis, Database Management, Data Structures, Network Programming, Cryptography

Projects

Global Economic Intelligence Dashboard — Data Analytics & BI

[GitHub](#)

- Collected, cleaned, and analysed World Bank dataset across **195 countries** and 5 macro-economic indicators; performed EDA to uncover trends, patterns, and anomalies across time-series data.
- Built interactive Streamlit dashboard with Plotly choropleth maps and time-series charts; applied K-Means clustering to segment countries into 3 economic profiles for business intelligence reporting.
- Documented findings and delivered data-driven comparative analysis reports with charts and visualisations for non-technical stakeholders.

Real-Time Credit Card Fraud Detection — Data Analysis Pipeline

[GitHub](#)

- Performed in-depth data cleaning and preprocessing on **284,807 transactions**; handled class imbalance via SMOTE, engineered features, and identified fraud patterns through statistical analysis and EDA.
- Interpreted business metrics and trends to optimise model thresholding; presented findings via MLflow dashboards achieving **ROC-AUC 0.9807** with sub-5ms inference via FastAPI.
- Documented project outcomes and recommendations across a reproducible 7-phase pipeline with drift monitoring and automated reporting.

Document Layout Analysis & Intelligent OCR System

[GitHub](#)

- Cleaned and preprocessed **85K+ PubLayNet document images**; analysed layout patterns across 5 structural classes to enable structured data extraction from unstructured PDFs and scanned documents.
- Integrated LLM-based summarisation via Anthropic Claude API, reducing manual document review and reporting time by an estimated **40%**.

Chicken Disease Classification System

[GitHub](#)

- Collected, labelled, and preprocessed 390 fecal images; trained VGG16 model achieving **94.83% accuracy**; documented findings and recommendations via structured evaluation reports.
- Deployed via Flask REST API with drag-and-drop interface; reproducible DVC pipeline for consistent data processing and analysis.

Skills

Data Analytics	Data Cleaning & Preprocessing, EDA, Statistical Analysis, Hypothesis Testing, Feature Engineering, Business Intelligence, Reporting
Visualisation	Power BI, Plotly, Matplotlib, Seaborn, Streamlit, Google Sheets, Microsoft Excel
Python & Data	Python, Pandas, NumPy, Scikit-learn, SQL, MySQL, PostgreSQL, MongoDB, Jupyter Notebook
ML & AI	Machine Learning, Deep Learning, PyTorch, TensorFlow, XGBoost, LightGBM, LangChain, RAG
Tools	Git, GitHub, Docker, FastAPI, Flask, MLflow, DVC, Airflow, AWS Basics

Leadership & Activities

INFRA CYBERWISE-2026 — Infrastructure Cybersecurity Workshop

Jan 2026

Event Organiser, Cyber Club IITRAM

IITRAM, Ahmedabad

- Coordinated two-day technical workshop; presented session findings and reports to **100+ attendees**; managed volunteers and end-to-end logistics.

CYBERWISE — Cybersecurity Workshop (Sponsored: CAWACH Kendra, Govt. of Gujarat)

Nov 2025

Event Organiser, Cyber Club IITRAM

IITRAM, Ahmedabad

- Co-organised two-day workshop on cyber law and fundamentals; managed **150+ registrations**; received award certificate for outstanding contribution.
